

One of Modern Plastics Equipment's original IPT customers and one of the heavy weights in our region has further confirmed its confidence in our IPT precision pipe testing equipment with the upgrade of its Wellington NZ plant recently.

The Wellington Technical staff chose the new IPT BlueLine Airless System in conjunction with IPT's latest patented Datalogging software for their QA requirements. The IPT BlueLine series is becoming very popular due to its ease of operation. With a colour touch screen displaying excellent real-time graphics it's very easy to see why.

The data logging software not only runs with the Internal Hydrostatic Pipe testing, but also includes gradient-programmed pressure Burst testing, Hoop Stress testing and temperature monitoring of Baths.

The software is also expandable to include other forms of laboratory testing with the aid of an analogue/digital interface box supplied by the technical engineer's at IPT.

The IPT BlueLine Series accommodates up to 20 individual samples to your nominated pressure range

The IPTdatalogging ® is installed on a remote PC and communicates with the BlueLine Cabinet by means of a conventional network cable connection. The system also allows for remote monitoring of the installation by either digital or analogue modem dial up connection.

The important features that were immediately realised were:

- Fast test set-up with downloading of template parameters direct to the test station
- The security and reliability of filing and evaluation of data
- Extensive data export possibilities eg polled email of test results to other domains
- Professional presentation of results
- Clear statistics about the utilisation of the laboratories test schedule.

The staff from Iplex Pipelines also participated in a 3-day training program on the equipment and software

Another success story by IPT "Your Statement of Quality "
